### **Multi-room Audio Game Changer! Axiom AX-MINI 4 now available**

Designed and built from the ground up specifically for the new home market yet flexible enough to be a retro fit product as well. The Mini 4 redefines the meaning of what it is to be a game changer.

#### **Endless Music**

Two independent internal streaming sources lets you play music from thousands of internet radio stations via Pandora or TuneIn and from your NAS drive. The Mini 4 also fully supports "Play from my device" this allows you push any locally stored music on your iOS or Android device to any zone in the system via your wireless network.

Two additional analogue inputs connect your favourite devices so you can hear and control them everywhere in the house.

The four powered stereo outputs deliver an enviable 30 watts per room and by simply adding more Mini 4's you can expand up to 32 rooms. This is a hidden audio system that can fill your world with music.

#### **Unrivalled control**

All this is easily and intuitively controlled by the FREE app (iOS and Android). The app auto discovers the amplifier so there is no complex setup. There is also a wall mount keypad option, all designed to put you in control.

For those that want a customised experience the internal webpage has all the customisation needed to control and configure the system the way you like it, including Bass, Treble, Balance, Loudness and audio delay. Load up Axiom Design Portal and you can fully customise the layout and setup control for 3rd party devices like Foxtel, Apple TV or a CD player just to name a few.

Prepare to be spellbound in as many rooms as you want.
