

DISTRIBUTED SOURCES

Distribute 32 sources around the Axium network

The latest generation of Axium amplifiers, AX-1250 and AX-Mini-4, boast a technology for streaming up to 32 sources from any Axium amplifier on the network to any other Axium amplifiers.

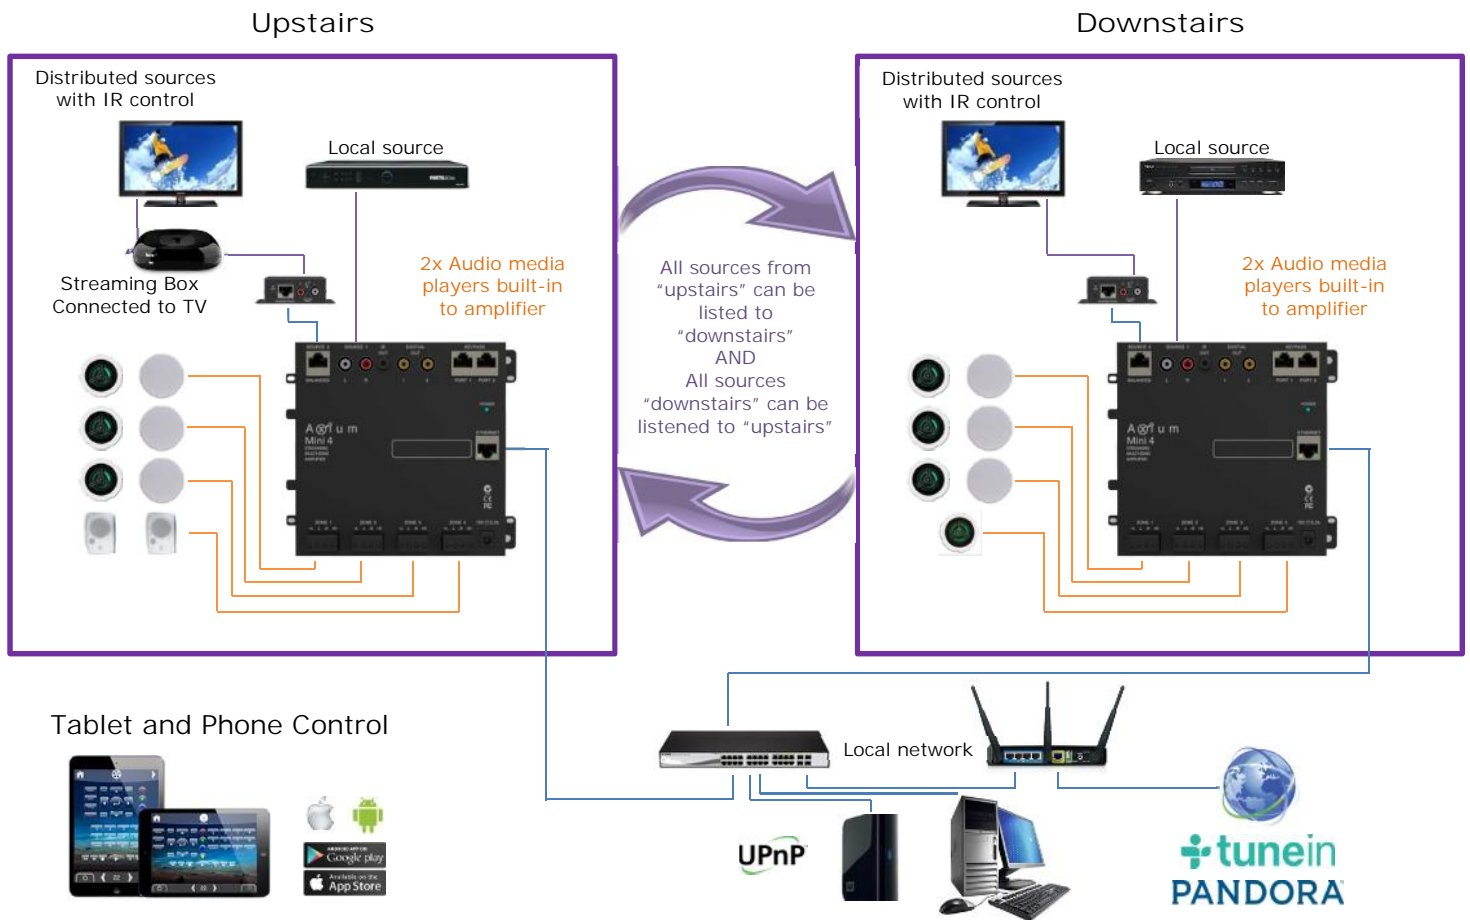

What this means is that you are no longer restricted to having all your equipment located in the one area or being limited to the just listening to the physical inputs located on the main amplifier. Not only can you listen to the distributed source you can also control* it!

*Control of distributed source will require programming and in some cases may require an Axium controller.

Possible Connection Scenarios

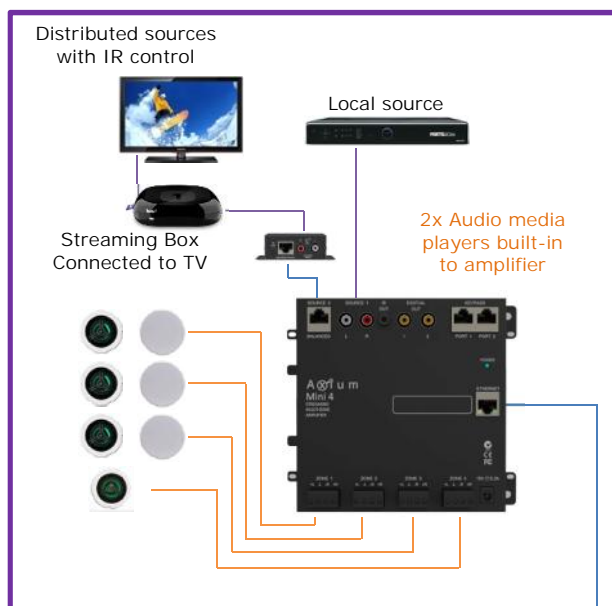

All sources on each amp available in ANY zone

2x AX-Mini 4 amplifiers

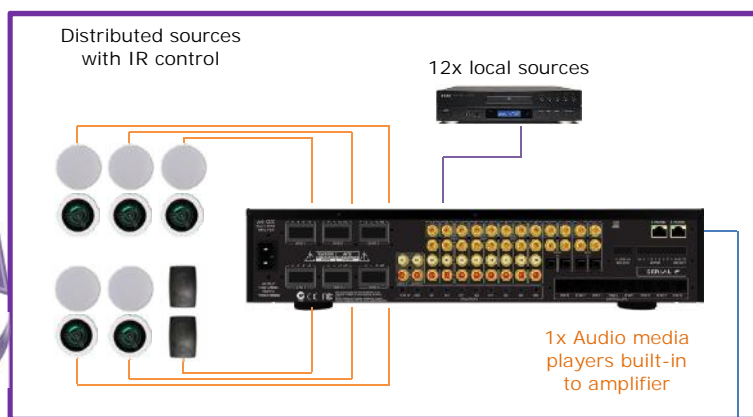

1x AX-Mini 4 amplifier
1x AX-1250 amplifier

Upstairs

Downstairs

All sources from "upstairs" can be listed to "downstairs"
AND
All sources "downstairs" can be listened to "upstairs"
