Axium Distributed Sources Welcome to the Distributed Sources Section using an Axium Mini4/1250 Amplifier & AMM

Audio & Control Systems

 $\odot \odot \odot$

Distributed Sources allow for all sources to be available across all amplifiers. It also allows you to select what source buttons are shown on your mobile app.

By default, Automatic Assignments is enabled meaning that all sources and stream buttons are visible in the mobile app.

You may have only My Sky and a Blu-Ray player as sources connected to the amplifier and only require 4 network streams from the AMM so only those buttons need to be visible.

This can be achieved using the Distributed Sources table

Ensure your mobile device is connected to the same network as the Mini4/1250 and the AMM

Select the Axium app icon to launch

The self discover Axium template will load showing all sources and the AMM network streams

A 🐼 î u m

This will open the device settings page as below, select and press the Source button

Automatic Assignments is enabled by default and all sources will be displayed on the mobile app.
